

1	Replace the project title
	<title>Display Coordinates and Elevation to Popup</title>
2	For SceneView, remove zoom and center properties, set a camera with position, tilt, and heading values.
	<pre> mySceneView = new SceneView({ container: "map1", map: myMap, camera: { position: [-122.4479, 37.7531, 1000], tilt: 80, heading: 330 } }); </pre>
3	Add the SceneView on-hold event listener, and activate using the SceneView popup by calling the popup.open function.
	<pre> mySceneView.on("hold", function(e) { mySceneView.popup.open ({ location: e.mapPoint, title: "This point coordinates and elevation are:", content: " longitude: " + e.mapPoint.longitude + "
" + " latitude: " + e.mapPoint.latitude + "
" + " elevation: " + e.mapPoint.z }); }); </pre>
