1	Replace the project title
	`<title>`Display Coordinates and Elevation to AlertView`</title>`
2	For SceneView, remove zoom and center properties, set a camera with position, tilt, and heading values.
	```mySceneView = new SceneView({ container: "map1", map: myMap, camera: { position: [-122.4479, 37.7531, 1000], tilt: 80, heading: 330 } });```
3	Add the SceneView on-Click event listener and add code for alert view in the listener function
	```mySceneView.on("click", function(e) { alert("The coordinates you clicked on map are: "+ " \n " + " longitude: " + e.mapPoint.longitude + " \n " + " latitude: "+ e.mapPoint.latitude + " \n " + " elevation: "+ e.mapPoint.z); });```
